EDUCATION

University of California San Diego

MS Computer Science (Specialization in Machine Learning)

Thapar University, India

BE Computer Engineering

GPA: 3.93/4

Sep 2016 - Jun 2018 **GPA: 9.88/10**

Jul 2011 - Jul 2015

RECENT INDUSTRY EXPERIENCE

Machine Learning Engineer II @ Twitter Inc., San Francisco

Jul 2019 - Present

- Member of Timelines Quality team working towards developing and deploying ML models to improve the user experience on the Home Timeline and Tweet Detail page.
 - Working on engineering better features and models to drive up the content quality on Twitter's Home Timeline and Tweet Detail pages.
 - Performing **Data Science analysis** to identify potential problems and their impact on user satisfaction.
 - Working on building end-to-end **ML training and deployment pipelines** using Airflow.
 - Developing **ML tooling** using BigQuery and GCP to **accelerate exploratory analysis by 10x**.
- o Technologies: Python | Scala | Tensorflow | Scalding | Hadoop | Airflow | BigQuery | GCP

Software Development Engineer @ Amazon.com, Seattle

Jul 2018 - Jul 2019

- o Worked for Amazon Global that enables customers to buy products internationally based on export eligibility.
 - Improving the infrastructure scalability by designing solutions using Native AWS technologies.
 - Conducting experiments to improve the eligibility prediction of products using Machine Learning models.
- o Technologies: AWS Technologies | Java | Python | Jupyter Notebook

Software Development Engineering Intern @ Amazon.com, Seattle

Jun 2017 – Sep 2017

- o Interned at **Financial Intelligence Systems** team which provides a platform for running big data operational workloads consistently within service level agreement. Worked towards designing and implementing:
 - Support for **ACID properties and non-blocking compaction** (discarding stale data) with consistent reads in Hive.
 - A solution based on the concepts of append-only table and multi-version concurrency control.
- o Technologies: Java | Hive | DynamoDB

RECENT ML PUBLICATIONS

Addressing Marketing Bias in Product Recommendations (Published at WSDM 2020)

- o Recognizing that consumer interaction might be **biased by how product is marketed**, we sought to understand how that affects the classic Recommender Systems algorithms and how to correct for this bias.
- We study this phenomenon for different **consumer-product market segments** on two **e-commerce datasets** we collected.
- We develop a framework to address this potential marketing bias that **significantly improves the recommendation fairness** across different market segments, with a **negligible loss (or better) recommendation accuracy**.

Fine-Grained Spoiler Detection from Large-Scale Review Corpora (Published at ACL 2019)

- o Contributing large-scale book review dataset that includes fine-grained spoiler annotations at the sentence-level.
- o Incorporating the findings from exploratory analysis, we developed a **Hierarchical RNN architecture** to detect spoiler sentences in review corpora. Attention mechanism in the architecture reveals interesting spoiler cues.
- Experimental results demonstrate that our method outperforms strong baselines by nearly 3%.

Decomposing Fit Semantics for Product Size Recommendation (Published at RecSys 2018)

- o Proposed a framework based on **latent factor model** and **metric learning technique** to predict fit of different catalog sizes of clothing products for recommendation.
- o Contributed the only publicly available datasets for the catalog size recommendation problem.
- o Observed an improvement of up to 18% over an algorithm developed by Amazon.

SELECTED ML PROJECTS

Sarcasm Detection using Hybrid Neural Network

Python | PyTorch

- o Collected a news headlines-based dataset which improves upon frequently used Twitter datasets by removing the noise in label and language.
- Developed **interpretable hybrid neural network architecture** (CNN + RNN) with attention mechanism which improves baseline by **5**%. Attention module provides insights about the cues that make sentences sarcastic.

Jointly Modeling Aspects, Ratings and Sentiments with Temporal Dynamics

Pythoi

- o Implemented a **probabilistic graphical framework** which utilizes data from product reviews to jointly model aspects of the products, user sentiment on products and associated ratings to predict the unknown ratings.
- o For interpretability, model **produces insights** on the various aspects of products and user sentiment on them.
- o Incorporated **temporal information** into the joint model which improves performance by **1**% and additionally provides insights into **how users' preference of different product aspects change over time**.

Hierarchical Attention Network for Rating Prediction

Python | Keras

- Implemented a hierarchical RNN with attention mechanism that uses product reviews to predict the product ratings.
- Attention mechanism allows the RNN to focus on words and sentences that **best explain the rating** given to an item and uses this knowledge to predict unknown ratings.

ML TEACHING EXPERIENCE

Teaching Assistant @ Amazon's Machine Learning University

Jan 2019 - Apr 2019

Introduction to Data Science

- Session: 1-2019 | Instructor: Zachary Levin (Senior Data Scientist)

Text Mining

- Session: 2-2019 | Instructor: Pascual Martinez-Gomez (Applied Scientist II)

Teaching Assistant @ UC San Diego

Sep 2016 - Mar 2018

o Recommender Systems and Web Mining (CSE 258)

- Session: Fall 2017 | Professor: Dr. Julian McAuley

ACHIEVEMENTS AND POSITIONS OF RESPONSIBILITY

- Co-hosting a workshop on How to curate quality datasets for machine learning at UT Austin for Algorithm Conference 2020. (Postponed due to COVID-19)
- o Ranked in **Top 20** dataset contributors on the **Kaggle** Platform. My datasets have collectively **900**+ upvotes, **30,000**+ downloads, and **150**+ kernels.
- Sarcasm Detection dataset was used in Deeplearning.ai's NLP in TensorFlow course on Coursera for teaching purposes.
- Won the Yuuvis SF Hackathon for building an Alexa skill to easily store, retrieve and share documents using the Yuuvis API.
- Research work on Spoiler Detection got featured in TechCrunch, NBC, Gizmodo, and Geek.com among others.
- **Program committee member** and **reviewer** for the SciPy 2019 conference.
- o Reviewer for Amazon's Machine Learning Conference (AMLC) 2019.
- o Received a financial grant from Python Software Foundation to attend PyCon 2019 in Cleveland, Ohio.
- Technical Writer for the Towards Data Science where I write blogs on Machine Learning concepts.
- **Mentored** first-generation undergraduate students at UCSD under the JUMP mentorship program.
- o Mentored newly joined graduate students at UCSD as part of Graduate Women in Computing.
- o Received university medal for being the topper of Computer Engineering batch at Thapar University
- o Regional finalist for ACM-ICPC Asia Region, Kanpur site 2013 held at IIT Kanpur.
